

Abstract

Pronunciational in Sura Al-Bakara

This study is divided into four sections is. It is preceded by an introduction and it is followed by a conclusion.

Introduction:

The introduction concentrates in the importance of the subject, the reason for choosing such a subject, the research methods and the subject's resources.

Section one:

This section is divided into tow part.

The first part is entitled "linking in language and idioms. This part concerns with the meaning and the steps of the liking of the words until it becomes a scientific method. This method explains the meaning and the synonymous junction in great objectivity and clearness.

The second part is entitled "the types of linking¹¹ in this part; tow types of connections are discussed. The first kind concerns with the immaterial linking particles. It concentrates briefly on the predications, the meaning and the totality. The second type concerns with pronunciational linking particles. This type is discussed in detail in the second section, which is entitled "the correct position of the linking in the construction of the Arabic sentence". Here the position of the linking is divided into tow main parts: linking with pronouns and linking with particles. The use of the pronoun as a conjunction, especially in the relative clauses and reflexive pronouns has been discussed in this part.

The second part concentrates on the linking particles such as the conjunctions, the conditional particles and propositions.

The third sections statistical chart which concern with the pronounciational linking's mentioned in Sura Al-Bakara. The fourth section is entitled " the pronounciationalconnections in Sura Al-Bakara and their influence on the meaning." Here, the previous statistical charts are analyzed in a certain way that shows the influence of linking particles on the meaping. "And" is used as a conjunction more than all the other Conjunctions because it is more remarkable then the others. This study shows that no particle could be replaced by another science every particle has its own characteristics.

Conclusion:

It includes the most important ideas that the research has discussed. It also shows the results that the research has come to.
